

NEURODATA WITHOUT BORDERS

A modern data standard for neurophysiology

NWB supports most types of neurophysiology data and metadata, including **extracellular and intracellular electrophysiology, optical physiology, behavior, stimuli, and other experimental metadata.**

Share data with collaborators efficiently!

Save time and effort by using the same data format between collaborators.

Speed up your data analysis!

NWB is integrated with a growing number of pre-processing and analysis tools, e.g., CalmAn, SpikeInterface, Brainstorm, and many more to come!

Increase the lifespan of your data!

NWB stores all experimental details so the data can still be understood years later.
